

autologyx

WORKFLOW AND AUTOMATION PLATFORM

The Autologyx platform enables businesses to automate, integrate and scale complex and routine processes, in a no/low-code environment.

The full benefits of process automation have been beyond the reach of many companies. Real world delivery and operations processes are complex, multipath, and can incorporate many different human and systems touch points from start to finish.

Customers turn to Autologyx to cut through the complexity: deliver fast, technology-driven products, services and workflows using just one platform.

Featuring:

- Real-time workflow engine
- No/ Low-code configuration
- Manual and automated triage
- Matter portals, dashboards & work queues
- Document automation & e-signature
- Flexible integrations

“ We’ve been able to deliver significant cost-savings to our clients through automation.

The Autologyx platform offers us exactly what we need: we’re currently only using a fraction of its capabilities but we’re already seeing significant returns.

Barry Rodick, Product Owner, KONEXO

REAL WORLD BUSINESS APPLICATIONS
