BUSINESS BENEFITS

- **Maximize value of your iManage suite** by automating workflows around iManage Work and/ or Extract
- **Maintain full auditability and document security** in iManage Work
- **Comprehensive APIs to integrate with other third party systems** such as document automation or e-Signature
- **Autologyx is an iManage Solutions Partner** so you will never fall between the gap with clear responsibilities between all providers
- **Enterprise-grade** cloud architecture and deployment

Configurable Workflow & Automation

Transform your document review exercises with Autologyx for iManage: the no-code Digital Operations Platform's tailored solution for iManage customers.

Out of the box the solution provides configurable review workflows for up to 3 tiers of review, with unlimited users. The review solution seamlessly integrates with both Work matter folders and iManage's machine learning extraction to remove all friction from the review process: automatic intake of documents from your designated matter folder, ML extracted text loads alongside your review questions in Autologyx, and review summaries are automatically pushed back into your matter folder – all without losing the audit and security of the iManage suite.
